2 - Background, Problem Overview

Cryptocurrency Markets

Cryptocurrency markets continue to increase in awareness and popularity. In 2017, the prices of more popular virtual currencies, such as bitcoin and ethereum, have soared to record highs amid increased investor interest. This increase in investor interest has led to the emergence of many other available options.

With just a few lines of code, nearly anyone can issue their own new cryptocurrencies and offer it to the world. These other options include numerous “alt-coins” and “app tokens”, which have arisen to tackle many different opportunities for which the blockchain provides next-gen solutions. These currencies, developed on the blockchain, offer built-in transparency - but an understanding of coding is required to comprehend the technologies and whether they are truly capable of the disruption they claim.

This increase in the number of available cryptocurrencies has allowed for an unprecedented opportunity for traders, but it also makes it makes a trader’s job increasingly more complex to identify exceptional investment vehicles. Cryptocurrency market participants are overwhelmed by a very large and growing amount of data that needs to be digested and understood to be successful.

Young, volatile, borderless, and available 24/7 - these markets are extremely far from efficient. This means that there are significant excess returns to be had, or Alpha - especially when compared with traditional markets. Cryptocurrency markets are still in their infancy and we have yet to see a significant influx of institutional interest.

The cryptocurrency market has evolved during the age of the internet, so information itself is quite easy to come by - but good unbiased information is very difficult to identify from the massive amount of available information. There are multiple instances of misinformation, disinformation and widespread “pump & dump” schemes. With all of this conflicting available information, what is the truth and what is a distraction? If traders can properly analyze and absorb only the useful information, there are myriad ways to generate superior returns and profit.

4 - Token Mechanism

The CryptoTrustConsulting Token (CRTRC) is an ERC20 Ethereum token. Ethereum tokens are represented as smart contracts that are executed on the publicly-available Ethereum blockchain. The CRTRC token's design follows the widely-adopted token implementation standards. This allows token holders to easily store and manage their CRTRC tokens using existing solutions including Ethereum Wallet.

The source code to CRTRC's smart contract is publicly available on GitHub. The supply of CRTRC tokens is limited to 21 million CRTRC tokens. The Ethereum network enforces that there will never be more than this initial 21 million CRTRC tokens minted.

We will continue to support and promote the trading of CRTRC tokens on several exchanges, as well as introduce subscription-based access to CRTRC's Platform after the CRTRC token is added to an adequate number of exchanges to allow for sufficient volume.

5 - CRTRC Token Sale

For the CRTRC token sale, contributors can receive updates and announced on the CRTRC token sale webpage (crrc-coin.com).

CRTRC's Platform will allow for increased inclusion of beginner crypto traders, giving them greater trading confidence in the cryptocurrency markets and should help encourage more traders to enter the market.

Token sale participants will be able to send Ether (ETH) or Bitcoin (BTC)* to the Cryptotrustedconsulting Ltd. token sale address only after the start of the token sale period.

Please only contribute to official ETH address as listed on the official Cryptotrustedconsulting Website (crtr-coin.com).
